FTP Directory Creator (socket)

Description
Your task is to create a class that connects to an FTP server,
logs in with provided credentials, and creates a specified
directory. You will implement this class using Python's socket
library.

Output (without unit test)

257 "/new_directory" created successfully.

Output (with unit test)

login called with call(b'PASS 123\r\n')
test attribute passed: 257 "/new_directory" created
successfully. is equal to 257 "/new_directory" created
successfully.
quit called with call(b'QUIT\r\n')
socket close called with call()
